

Punith P

Bengaluru, India | punithp.1307@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

Summary

Frontend Developer and Software Engineer with hands-on experience building real-time 3D web applications, full-stack systems, and published software. Shipped a Fabric Minecraft mod with custom client-server networking, a deployed WebGL astronomical simulator, and a full MERN stack medical records platform. Focused on performance, interactive systems, and building software that solves real problems.

Skills

- **Languages:** JavaScript (ES6+), TypeScript, Java, HTML5, CSS3
- **Frontend:** React, React Three Fiber, Responsive Design
- **3D & Graphics:** Three.js, WebGL, GLSL, Blender
- **Backend:** Node.js, Express.js, MongoDB, Mongoose
- **Tools:** Git, GitHub, JWT, REST APIs, Fabric API

Projects

Lipi — Fabric Minecraft Mod

[CurseForge](#) | [GitHub](#)

- Built and published a Fabric mod for Minecraft 1.21.5 with custom client-server packet architecture using Fabric's networking API
- Designed a dedicated chat UI in Java — popup window, channel sidebar, local timezone timestamps, unread badge, scrollable message history
- Implemented server-side logging, temp mute system with auto-expiry, per-player cooldown, and GDPR-aware data design
- Published on CurseForge and Modrinth with active user testing

JeevanLocker — Medical Document Management

[GitHub](#)

- Building a full-stack MERN application with role-based access control (Patient, Doctor, Admin) and JWT authentication with bcrypt hashing
- Designed document upload pipeline using Multer and centralized audit logging tracking login, upload, access, and sharing events
- Designed blockchain integration architecture using Ethereum smart contracts for document hash verification — planned for next phase

Low-Poly Time Sync Environment

[Live Demo](#) | [GitHub](#)

- Deployed real-time 3D web app rendering ~18,000 stars using Three.js and WebGL with geolocation-based astronomical simulation
- Wrote GLSL shaders for moon phases, sky transitions, and procedural volumetric clouds using FBM noise

Procedural Low-Poly World Generator

[GitHub](#)

- Building seed-based procedural terrain system using React Three Fiber with archetype-based mountains, domain warping, and instanced rendering
- Built Blender-to-web GLB pipeline with flat per-face normals and per-face color hashing for consistent low-poly aesthetic

Education

B.E. in Computer Science & Engineering

2023 – 2027

K S Institute of Technology, Bengaluru

Additional Information

- **Achievements:** TCS Tech Bytes statewide engineering IT quiz participant (600+ participants)
- **Certifications:** AI Skills Passport (EY & Microsoft), AWS Cloud Practitioner (Infosys Springboard)
- **Workshops:** ImpactX Hackathon (IEEE), Generative AI Workshop, Blockchain & Cybersecurity Training (IBM SkillsBuild)
